

PROJECT PROFILE

Hoboken Pier C Project - Hoboken, New Jersey

PROJECT OVERVIEW

Pier C Park is located along the Hudson River Waterfront. The pile supported filigree precast concrete system supports almost two acres of mixed use park for all ages from preschool through school age children to recreational opportunities for adults.

The sculptural quality of the land simulates the forms of a barrier beach while the interior breaks open to reveal the play landscape.

The idea of nature as recreation is expressed in the parks wildlife opportunities represented by plantings and roosting structures.

Value of Work Performed:
\$18,960,000

Project Start Date:
July, 2007

Projected Completion Date:
December, 2008
